

INSTALLATION & HANDLING GUIDE

Labelling

Shop drawings will be supplied and approval/sign-off requested for every panel prior to manufacture to ensure that our panels are made how you want them. All our panels will be labelled to allow installers to spend less time in laying up difficult designs or patterns.

“Hush Panels are a prefinished timber product and as such, should be treated with care”

Handling

Keep work area clean and where possible, use two person lift for each sheet. Avoid sliding sheets over the decorative surface.

Storage

Hush Panels come pre-packed in a solid side pallet. This is to help with protection during travel. Store pallet inside and make sure that panels are protected from direct sunlight and moisture. Remove solid top and sides to allow panels to equalise within the environment that they will be installed into. If panels are removed from pallet and stored loose, please ensure that there is sufficient support to protect panels from sagging/warping prior to installation.

IMPORTANT NOTE:

Ply panels must be unpacked and either installed or stored vertically with paper/foam between sheets within 3 days of receipt

Installation

Hush Panels can be factory finished to custom sizes. If full 2400 x 1200 panels have been ordered, subject to pattern chosen, these may be cut to size on-site with a suitable skill saw with a fine tooth crosscut blade (carbide tipped) and straight edge. Important Note: Please advise as early as possible if there is a cut-out (ie – downlight) or power point in the design, as we may have to have further conversation around modifying the pattern to accommodate.

Inspect panels for any defects prior to installation. Cooper Webley will not be responsible for any costs incurred (timewise for installation or removal) on unacceptable panels.

Hush Panels are an interior panel and are fixed to framing as you would any other Plywood or MDF panel. See attached table for recommended fixing details.

A good quality construction glue can be used with either a 50mm panel pin or counter sunk screw. For our stepped slot (secret fixing) a counter sunk screw can be replaced with a 6 gauge pan head screw.

Material Thickness (mm)	Maximum Framing Centres (mm)	Fastener Centres Perimeter (mm)	Fastener Centres Intermediate (mm)	Expansion Joints Required
MDF		Walls and Ceilings		No
9.0	450	200	300	
12.0 - 18.0	600	200	300	
PLY		Walls		No
6.0	450	150	200	
		Ceilings		
6.0	600	150	200	
		Walls and Ceilings		
9.0 - 12.0	600	200	300	
16.0 - 25.0	600	300	400
